

The Aircraft By The Wright Brothers

By: Olivia, Jack, Isla,
Ryan

Why the Wright Brothers Created the Aircraft

The Wright Brothers father had created the helicopter when they were just kids. The helicopter is a smaller version of the airplane/aircraft. The father had inspired The Wright Brothers to fly one day.

How the Aircraft Works

The plane has 2 wings which are parallel to each other so the plane could fly. Every plane has a airfoil you might just be wondering what's an airfoil. An airfoil is the surface of the wing, stabilizer, and aileron. They also have a steering wheel called a yoke. The plane has an engine to power it.

How it promoted during time?

The aircraft promoted by being a one or two person aircraft to being a multi person aircraft and it is now called a airplane.

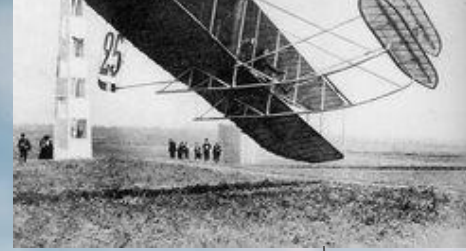

How life would be like without the aircraft/airplane?

Life without the aircraft/plane would be slow transportation and you would have to travel by boat, train, and car.

**The third
successful flight
in 1905**

**The First
successful
Flight in 1903**

The airplane race in 1909
